

Most small breed dogs die of heart problems from their teeth: Heart murmurs and CHF

1. This works for small / medium dogs. **DO IT**
2. Buy "Yak Cheese Yak Milk Tibetan Treats" (Or some variant) on Amazon.com (The link below links to a good one if needed.)
3. Your small dog won't like 'em in this form.
4. Put one of those in the **microwave** for **sixty seconds**. (1 minute at 1200W)
5. When it's cooling down and not *boiling* hot, cut it into pieces wider than the dog's mouth.
6. Give a piece every day.
7. If the dog takes them and chews them up daily their teeth will be drastically improved.

This may or may NOT be a replacement for a "dental cleaning with extractions" that many dogs actually REQUIRE. If your dog won't chew one of these regularly, your dog almost assuredly needs a dental cleaning. Please don't tolerate a rotting face just because it's hidden or you're scared of anesthetizing an elderly dog. We've never lost one.
