

LIVER PROTOCOL

Incorporates medicines and Western Medicine.

- Safe
- Over the counter most ingredients from Amazon.com
- Starts working within 1-2 weeks
- Cost-effective
- Not for “severe” liver failure. You need stronger than this.

WHAT TO GET ON AMAZON

1. Berberine - One capsule per day not to exceed 1000mg
2. TUDCA - One capsule a day not to exceed 1000 mg
3. Ursodiol (Veterinary not Amazon) – One capsule a day not to exceed 600 mg
4. Clavamox or similar antibiotic for any bacterial component to the hepatitis
5. Very low dose Prednisone / Prednisolone
6. Weekly **DMSO** fluids. This is very soothing to damaged and dying liver tissue.

Dose is NOT CRITICAL on the first 3 supplements. **Overdose is impossible.** The worst that can happen is stomach upset from too much Ursodiol. Clavamox and Prednisolone have limits.

Dose these ONCE A DAY

The “magic bullet” for pilling a dog is Braunschweiger or Liverwurst. Do not use Liverwurst or Braunschweiger with dogs who have pancreatitis.

This combination does three things:

1. **Empties the gall bladder.**
2. **Is trophic to hepatocytes and propels the enterohepatic pathway of bile salts.**
3. **Reduces inflammation in the liver and soothes damaged and dying hepatocytes.**
