## Optimizing Canine Life & Life Span

Bark
Collars
Work!

Lifetime low body weight, clean teeth and hard gums, and support for emerging geriatric needs after 10-12 years old.

Feed amounts you want until spayed or neutered. Switch to adult food early to spare joints from over-rapid development and pasty stools.

Your dog should be afraid to bite you. It's the only time they need fear in their upbringing. Dogs that bite don't last around you, kids and neighbors.

	Cup
<10	360
	1/4
20	1/3
30	1/2
40	2/3
50	3/4
60	
For 80 pounds just add the 40lb rate	

twice. You get it.

Plain dry food with

nothing in it.

Start scrapey dental exercise early, and daily. Or: 30min. 3x week. Add +30% to feeding at left. +20% to feeding at left. +10% to feeding at left. Feed exactly to chart.

10yr Cataract Surgery
Because senescence can be visual
When older than 10:
Annually Daily
Thyroid Assay Iron

Don't tidbit or "mix in" the dry food! That stuff belongs "on the side" leaving dry food 'plain'.
